Content

Never more than now has competence in the digital world been more needed by police officers around the globe. Where are the opportunities, we see by using new technologies e.g., in forensic investigations and where are their limits?

This international seminar is about drone defense and drones in the context of policing like capturing evidential images at crime scene and scenes of road traffic collisions, in searching for missing people or offenders. It's about the use of Virtual Reality in police education and training. It's about Apps designed for being used in law enforcement and to enhance public safety. Join us for an international seminar for young police officers on the impacts of an ever-increasing digitalized working environment.

Seminar Chair

Peter Newels, Senior Chief Superintendent, Police Headquarters Münster

Philipp Kurz, Chief Inspector, Police Headquarters Münster

Interpreters: German/ English

Fees

480 € | IPA Members 320 €
